

Meet Kennedy Lively

This is the 6th anniversary of Team Kennedy and we love “walking to her beat”! It was just 6 years ago when her little beat was repaired.

Kennedy was born with a congenital heart defect called Transposition of the Great Arteries, which was complicated by sub pulmonary stenosis. At just 4 hours old she had a balloon procedure as a temporary fix until she could undergo her permanent operation. At three months old Kennedy had open heart surgery to mend her heart for a more permanent fix. She is closely monitored by a

wonderful team of doctors and is expected to have a long healthy life. She is now a healthy 6-year-old that enjoys ice skating, wakeboarding, and riding her miniature pony Cinnamon.

Many friends and family are walking with Kennedy to celebrate 6 years of her heart beating strong! It is now a tradition family and is wonderful to be surrounded by other that share the same passion for heart health. Our team has grown from just a few family members and friends to close to 100 walkers raising funds and awareness for the AHA. Now Kennedy celebrates with her daycare friends, teachers, church group, school classmates and many others she has impacted along the way. Kennedy always says, “Heart Walk Day is my favorite day of the year!”

Thanks to the surgeons at the Children’s Medical Center in Dallas and her amazing cardiology team at OU, Kennedy is leading a perfectly normal life. We would also like to thank Christine Sanders with SB Graphics and Monty Bartel at GSG for helping Team Kennedy grow and raise awareness for heart research. Without them, Team Kennedy would not be possible.

Thanks again for this amazing opportunity!
