

Brady

Survivor

Ten days after Brady was born, his parents recognized that something wasn't right. He was rushed to the hospital and had open heart surgery two days later. Doctors discovered that his heart did not have the proper blood flow. Doctors repaired his heart and now Brady is a thriving nine-year-old who loves to play sports, especially baseball with his brothers. Brady wants kids to know that even though they may be small, they can save a life just by knowing the signs of heart trouble, calling 911, and providing CPR!

The Kids Heart Challenge and American Heart Challenge funds research that helps kids have longer and stronger lives. Your support helps families have hope and for that they are so grateful.

Together, we are creating a world of longer, healthier lives.
