

Sai

Survivor

Before Sai was born, doctors warned his parents that he would be born with multiple heart defects. After he was born, he had to stay in the hospital for two weeks until his heart was stable to go home. Although he still lives with a heart condition, Sai has not had to have any surgery. He keeps his heart healthy by taking his daily medication, staying active, and eating healthy. Heart problems run in his family, so he encourages his friends and family to stay active. He appreciates Kids Heart Challenge/American Heart Challenge because of their great work promoting heart health.

The Kids Heart Challenge and American Heart Challenge funds research that helps kids have longer and stronger lives. Your support helps families have hope and for that they are so grateful.

Together, we are creating a world of longer, healthier lives.
