Jamie

Survivor, Grade 2

When Jamie was 5, a heart screening caught something he didn't know was wrong. Doctors discovered a small hole in his heart called an atrial septal defect, so he had to have surgery to fix it. Later, doctors also found that his heart sometimes beat too fast. This is called supraventricular tachycardia, and Jamie had another procedure to help.

Today, Jamie feels strong and healthy with no limits. He enjoys playing soccer with friends and eating nutritious foods. Jamie is proud to be part of Kids Heart Challenge/ American Heart Challenge and hopes to help the American Heart Association spread awareness and inspire others to take care of their hearts.

The **Kids Heart Challenge** and **American Heart Challenge** funds research that helps kids have longer and stronger lives. Your support helps families have hope and for that they are so grateful.

Together, we are creating a world of longer, healthier lives.
